ABSTRACT
Mobile has made the world the smaller, the literate or illiterate harnessing the technology for their convenience. In education sector its role as a tool has become more necessity, the academic libraries as centre for research and learning are started to use the technology to reach the users within the administrative framework. Since the students are finding more convenient in using the smartphone for all their co-curricular activities. Using this tool to attract the library services for the students has become much need of the hour. This paper tries to review the above concept.

KEY WORDS: Mobile Technology, Smartphone, Academic Library, Library Resources.
