INCOME AND EMPLOYMENT GENERATION IN RURAL NON FARM SECTOR

DR. TEMJENZULU JAMIR

ASSISTANT PROFESSOR,
NAGALAND UNIVERSITY,
LUMAMI, ZUNHEBOTO.

ABSTRACT:
The development of various non-farm activities, offers great potential for creating additional rural jobs and hence for stimulating the further growth of rural economies. The establishment of rural-based industries, in particular, has often been very effective in creating new job opportunities and providing supplemental income. Diversified production and trade activities have also offered rural communities better employment prospects and accordingly more stable growth of their economies. The main objective of the paper is to examine the Income and employment generation in three villages under Mokokchung district, Nagaland, India. The paper also looks into the type of activities that are carried out, the ownership pattern and the cost of establishment. Coal mining even though is done only for six months a year generates the highest number of employment and income followed by quarrying.

KEY WORDS: Employment, Income and Rural Non Farm.
