ABSTRACT:
The present paper aimed at studying EI in the component EM, EC and ES for working male and female. Maturity wise both are at equal level but when compared for EC and ES, If females are scoring higher than males, it is the further matter of study that how the organizations can use it for their betterment. It is suggested that in a group females can play better role while facing the challenges as their EC is higher than males, while working at responsible position female can prove themselves bridge between the higher management and the subordinates as they show high scores in ES.

KEYWORDS: emotional intelligence, male, female, working.
