ABSTRACT

The study was undertaken to study the Emotional Intelligence of Scheduled Caste male and Scheduled Caste female students. Total sample consisted of randomly selected 200 students from various colleges of Kanpur city of Uttar Pradesh. Of these two hundred students 100 were male and 100 were female. It was hypothesized that there is no significant difference in Emotional Intelligence of Scheduled Caste Male and Scheduled Caste Female students. Data was statically analyses by ANOVA. The female student (Mean - 114.02, SD - 16.85) had higher mean score than male students (Mean - 110.63, SD - 14.85). ANOVA (F-Ratio=2.28, Not Significant at .05 level) reviled no significant difference between the groups. It is concluded that null hypothesis is accepted.

KEYWORDS: Scheduled Caste, Emotional Intelligence, Education, students.
