ABSTRACT
This study was designed to examine the difference between mental health and social intelligence of adolescents of district S.B.S Nagar. The participants were 120 which was delimited to +2 students. The mental health inventory and Social Intelligence Scale were used to measure the mental health and social intelligence of adolescents. The data was analyzed by using t-test. The findings of the study showed that there was insignificant difference in mental health & social intelligence of boys & girls.

KEYWORDS: Mental health, Gender difference & Social intelligence
